

Why Made in Germany is the best choice for solar energy

Choosing aleo solar means committing not only to renewable energy but also to sustainability, quality, and responsibility. Our solar modules stand for:

Sustainable Production

- Short transport distances: Reduce CO₂ emissions through regional manufacturing.
- 100% green electricity: Our modules are produced using renewable energy.

Top Quality

- Stringent quality standards: Rigorous testing ensures maximum reliability and durability.
- PFAS-free: No harmful PFAS – safe for both people and the environment.

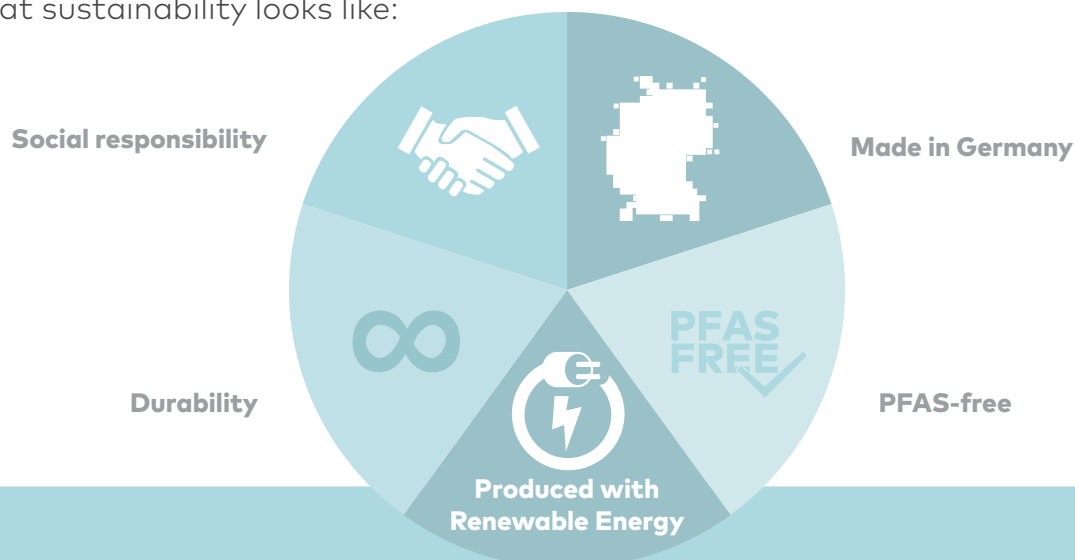

Taking Responsibility

- Protecting jobs: Supporting the local economy and skilled workers in Germany.
- Social responsibility: Fair working conditions and a focus on social values.

With aleo solar, you're investing in a future that benefits the environment, society, and your energy costs.

What makes aleo solar Made in Germany so special?

We combine sustainability, social responsibility, and quality in every single module. This is what sustainability looks like:

Tip for Energy Savers:

Depending on design and consumption, **the additional cost of a German-made module can pay for itself in as little as one year.** At the same time, you benefit from a long lifespan and high reliability, supported by our **30-year premium guarantee.**

The amortization period is based on average calculations under typical conditions.
